Module Overview

Summary

The Secure Password Recovery module is designed to offer an alternative for DotNetNuke site administrators to allow password resets to be completed in a safe manner. Using this system, users request their password reset, and the system then e-mails them instructions for resetting the password. The user can then request a new password, and login to the portal.

Module Features

- Improves portal level security by not sending the user their password via e-mail
- Allows users to find their account by e-mail OR username from the beginning
- Simple installation, drop on a page and you are done!
- Password reset requests will be valid for 24 hours

Dependencies

Minimum DNN Version

This module will work on DotNetNuke 5.0.0 and later.

Other Dependencies

None

Module Installation

This module installs just like any other DotNetNuke® module, simply upload the install package via the "Extensions" page and follow the prompts.

Administrator/Edit Permission Usage

Overview

At this point there are no settings or configuration items for this module. Simply add the "Secure Password Recovery" module to a page and you are done!

Future releases will allow for configuration of the "Expiration Date" and other information.

View Permission Usage

This module has two separate views. First is the default view where the user can request a password reset.

Secure Password Recovery

If you would like to have your password reset, please supply your username or e-mail address and instructions on resetting your password.

Username or Email:

Request Password Reset

Already Received a code?

If you have already received a password reset code, [click here](#) to reset your password.

From this view users can supply their username or e-mail address and their information will be sent.

Once a user has requested a password reset they will use the "Reset" screen to provide a new password.

Secure Password Recovery

Please enter your reset code and desired new password into the fields below and click the button below.

Reset Code:

New Password:

Confirm Password:

[Reset Password](#)

Once a user has reset their password, they can then login to the portal.

Support and Requests

Feature Requests

As a free module development of this module is completed on a "as time exists" basis and new features are based greatly on user feedback. If you have a feature that you would like to see in a future version of this module please log it as a request in product support tracker <http://productsupport.iowacomputergurus.com>, or contact us webmaster@iowacomputergurus.com and we will gladly see what we can do to get it implemented.

If you would like to sponsor the development of a feature for this module options are available for this as well. If a feature is sponsored the edit log will be updated to reflect the sponsoring individual or organization.

Module Version History

All free modules provided by IowaComputerGurus Inc. are available with full source code if you have a need to modify the modules outside of the scope of our regular updates. Doing this will take you outside the scope of being able to upgrade in the future, the only requirement for use is that all copyright statements remain intact on all files.
